

AI Agent Workflow

AI Agent Workflow

1. Course Content
2. Start the Dify Service
3. Case Study: Categorized Question-Answering Chatbot
4. Visualizing and Debugging Workflows
5. Accessing AI Agent Applications

1. Course Content

- Build intelligent agent workflows using multiple large AI models to implement complex logical functions.

2. Start the Dify Service

- Connect to the car's infotainment system via VNC or SSH. Enter the following command in the terminal:

```
sh ~/bringup_dify.sh
```

```
pi@raspberrypi: ~  
pi@raspberrypi: ~ 80x24  
pi@raspberrypi:~$ bringup_dify  
[+] up 14/14  
✓ Network docker_default Created 0.0s  
✓ Network docker_ssrf_proxy_network Created 0.1s  
✓ Container docker_init_permissions-1 Exited 7.8s  
✓ Container docker-sandbox-1 Created 2.9s  
✓ Container docker-web-1 Created 2.9s  
✓ Container docker-redis-1 Created 2.9s  
✓ Container docker-weaviate-1 Created 2.8s  
✓ Container docker_ssrf_proxy-1 Created 2.9s  
✓ Container docker-db_postgres-1 Healthy 7.8s  
✓ Container docker-worker-1 Created 0.3s  
✓ Container docker-api-1 Created 0.3s  
✓ Container docker-worker_beat-1 Created 0.3s  
✓ Container docker-plugin_daemon-1 Created 0.2s  
✓ Container docker-nginx-1 Created 0.3s  
pi@raspberrypi:~$
```

- Check the car's IP address. You can do this through the OLED screen, using `ifconfig`, or directly in the terminal. Enter the car's IP address directly into your browser's address bar to access the Dify management page.

```
jetson@yahboom: ~  
jetson@yahboom: ~ 80x24  
[System Information]  
-----  
IP_Address_1: 192.168.2.49  
IP_Address_2: 192.168.12.34  
MACHINE: OrinNx | ROS_DISTRO: humble | ROS_DOMAIN_ID: 30  
ROBOT_TYPE: ROSMASTER-M3Pro | CAMERA_TYPE: dabai_dcw2 | RADAR: Tmini-plus*2  
-----  
jetson@yahboom:~$
```

3. Case Study: Categorized Question-Answering Chatbot

- In the example AI application folder of this lesson, there are reference examples that can be directly imported and used.
- In the Dify homepage studio, click "Import DSL File".

- Select the example AI application `Complex agent.yml` in the course folder for this section, and then click "Create".

- You can see the workflow content as shown below.

- In the workflow, **Question Classifier** is a module driven by a large AI model. Its function is to categorize user questions into math questions, physics questions, and other questions. If the user's input matches a math or physics-related question, it will invoke the corresponding branch of the large AI model to answer it. The categories in **Question Classifier** are as follows:

Question Classifier

ADVANCED SETTING ▶

- The LLM-1 branch is used to answer math-related questions. The prompt and settings are shown below.

- The LLM-2 branch is used to answer physics-related questions. The prompt and settings are shown below.

4. Visualizing and Debugging Workflows

- To debug and test the workflow, click the preview in the upper right corner, and then enter the problem in the pop-up dialog box for testing.

- Simultaneously, the workflow will display the branches through which data flows in real time, thus facilitating workflow debugging.

- To expand your workflow, click the "+" sign on the left, which provides access to several pre-defined tools and modules for Dify.

5. Accessing AI Agent Applications

- After orchestrating your AI application, click "Publish Application" to save the configuration. Then, click "Copy URL" or "API Access Credentials" to access the created AI application via the web interface or backend service API.
